EDUCATION

Nanyang Technological University

Bachelor of Computing (Hons) in Computer Science

Expected Honours (Highest Distinction), Current CGPA: 4.51/5.00

Singapore

Aug. 2024 – Jul. 2028

SKILLS

Languages: Python, JavaScript, Java, C++, C, HTML/CSS, TypeScript, SQL, Bash

Frameworks: React, Node.js, Next.js, Vite

Developer Tools: Git, Linux, Vim, Google Cloud Platform, Render, Heroku, MongoDB Atlas

Databases: PostgreSQL, MongoDB, Neo4j

Libraries: pandas, NumPy, Matplotlib

EXPERIENCE

Undergraduate Research Assistant (URECA) | Website

August 2025 – Present

Nanyang Technological University

Singapore

- Developed features for SIERRA, a visual query interface for graph databases using React, Neo4j and Docker.
- Built dynamic front-end components in React to enhance data visualization, improving user interaction and accessibility.
- Implemented advanced query builders for Neo4j, enabling efficient execution of complex graph and relational database operations.
- Collaborated closely with faculty to define technical requirements, translating them into functional features that met academic and research needs.

CO-CURRICULAR ACTIVITIES

CCDS Transition Orientation Programme

December 2025 – Present

Technology Backend Officer

Nanyang Technological University, Singapore

- Supported technical execution of a large-scale freshman orientation by building backend systems for games and websites using Node.js, Socket.IO, PostgreSQL and AWS
- Coordinated with frontend and design teams to translate feature requirements into backend implementations
- Contributed to system testing and issue resolution during live events

PROJECTS

Lilian Discord Bot | Javascript, Node.js, npm, discord.js, Git | GitHub

June 2024

- Launched a multi-function Discord bot with moderation tools, interactive games and social features.
- Deployed using Render to 100+ active servers with 500+ monthly users.
- Achieved manual verification by Discord, meeting platform trust, security, and quality standards.
- Integrated external weather and YouTube APIs to deliver real-time content within Discord.

TransitSG | React.js, Vite, JavaScript, Python, FastAPI, Uvicorn, PostgreSQL | GitHub

September 2025

- Designed a public transport management system featuring real-time crowdedness tracking, interactive map routing and station downtime detection.
- Created a least-crowded route finder that reduced user exposure to congested stations by prioritizing low-density MRT and bus routes using live and forecasted crowd data.
- Engineered admin-side data visualization features such as issue heatmaps and system health dashboards, and improved system monitoring and response time.

BTO Management System | Java, Javascript, HTML/CSS | GitHub

May 2025

- Developed an interface to post, manage and apply for BTO flats.
- Defined role-based features and adhered to data encapsulation principles.
- Collaborated with team members on Github, applying OOP principles and version control across 200+ commits.

CERTIFICATIONS

- Associate MongoDB Node.js Developer (C100DEV)
- Github Foundations
- FreeCodeCamp Scientific Computing with Python
